Art Unit: 1645

Election/Restriction

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4, drawn to methods of identifying an agent for treating Crohn's disease, classified in class 435, subclass 4.

Page 2

- II. Claims 5-10, drawn to methods of preventing or treating Crohn's disease with an agent such as antibiotics, classified in class 424, subclass 184.1.
- III. Claims 11-21, drawn to methods of preventing or treating Crohn's disease with vaccines, classified in class 514, subclass 2.
- IV. Claims 22-25, drawn to methods of preventing or treating Crohn's disease with an agent that reduces the activity of pbrA, classified in class 424, subclass 184.1.
- V. Claims 26-30, drawn to methods of preventing or treating Crohn's disease with an agent that reduces the activity of PFTR, classified in class 424, subclass 184.1.
- VI. Claims 31-33, drawn to methods of diagnosing Crohn's disease by detecting pbrA, classified in class 435, subclass 7.1.
- VII. Claims 34-36, drawn to methods of diagnosing Crohn's disease by detecting PFTR, classified in class 435, subclass 7.1.

Additionally, group III is further restricted according to MPEP 803.04 which sets forth that biological molecules with different sequences are distinct inventions. Consequently,

Application/Control Number: 09/976,451

Art Unit: 1645

Applicant is restricted to a single protein (e.g., pbrA, PFTR, outer membrane protein, toxin, LPS, exotoxin A, or TonB) as well as a corresponding SEQ ID NO (i.e., SEQ ID NO: 2, 3 or 5) if selecting pbrA or PFTR. The generic claims of this group will be examined in their entirety, however, only limitations which encompass the elected antigen will be examined. Applicant is required to set forth which claims are encompassed by the elected antigen if selecting this group.

2. The inventions are distinct, each from the other because of the following reasons:

Invention I, drawn to methods of identifying agents is distinct from Inventions II-VII since it requires additional biological reagents and parameters for detecting agents which inhibit P.

fluorescens.

Invention II, drawn to treatment with antibiotics, and Invention III, drawn to treatment with vaccines are distinct since they involve treatment with different types of molecules. Vaccines are typically composed of antigenic proteins, while antibiotics are typically organic carbon based compounds.

Invention IV, drawn to treating with agents that reduce the activity of pbrA, and Invention V, drawn to treating with agents that reduce the activity of PFTR are distinct since they involve the inhibition of distinct molecules with distinct structures.

Application/Control Number: 09/976,451 Page 4

Art Unit: 1645

Invention VI, drawn to methods of diagnosing via detection of pbrA, and Invention VII, drawn to methods of diagnosing via detection of PFTR are distinct since they involve the detection of distinct molecules with distinct structures.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their separate classification and their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

Art Unit: 1645

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark Navarro whose telephone number is (703) 306-3225.
